

PORTABLE T-SORT ROLLER CONVEYOR

WITH AND WITHOUT CHUTES, UP TO 60 FT LONG

DETAILS

Width: **42"**

Length, collapsed: **144"**

Length, extended: **240"**

With pivoting chute: **288.25"**

Roller Centers: **2.25"**

IDEAL END USES

Our T-Spur technology can be applied throughout your operation in a variety of ways:

- **Manual Sort Operations**
- **Loading & unloading Transport Vehicles**

INDUSTRY NEED

Local delivery operations with fixed conveyor lanes dedicated to specific destinations, often times need flexible options for vehicle loading.

OUR SOLUTION

We developed the **Portable T-Sort Roller Conveyor** to support customers in quickly expanding their existing manual sort capabilities. Its flexible features allow operators to easily move the large 12 ft long portable conveyor components to a desired location, lock them in place, and extend their length to 20 feet. Multiple segments can achieve as much as 60 feet total extended lengths! The spring loaded chute on the base section is lined with UHMW and can be tilted to connect to an adjoining conveyor at 90 degrees, offering a low friction sorting surface to the newly created conveyor lane. Customers have reported significant increases in productivity related to the deployment of these relatively low cost units to existing operations, without the need for disruptive, and expensive system expansions.

FEATURES & BENEFITS

- Available in (3) 20 ft extendable mating sections
- 8" Offset Heavy Duty Swivel locking casters allow for **easy maneuvering**
- Torsion spring loaded pivoting chute
- Dual Lane 1.9 16g rollers on 2.25 centers
- Easy in & out extension
